NWSAmarillo

weather.gov/ama

Severe storms chances will continue until around 1 AM or so for the northwestern half of the Panhandles. Storms will have the potential to produce very heavy rainfall, strong winds up to 80 mph and hail up to quarter size.

Rain Chances Diminish

Morning fog and low clouds will give way to more sunshine

Weather Forecast Office

Lubbock, TX

Issued Jul 06, 2021 5:11 AM CDT

NWSLubbock

weather.gov/lub

Low clouds and fog will dissipate late this morning with partly sunny skies thereafter. Today's highs will be in the lower to mid 80s. Showers and thunderstorms will be less numerous today across the area.

Hazardous Weather

Tuesday High Temperatures

Another Day with Storm Chances

Weather Forecast Office

El Paso, TX

Issued Jul 05, 2021 8:20 PM MDT

Scattered showers and storms persist into Tuesday, especially over the Gila and Sacramento Mountains. Heavy rains could occur on top of the saturated ground, which could lead to flash flooding. High temperatures remain just below normal topping out in the mid 90s.

Rain Chances Continue Today

Scattered Showers and Storms

Weather Forecast Office

San Angelo, TX

Issued Jul 06, 2021 4:05 AM CDT

Hazardous Weather

A chance of mainly afternoon and evening showers and storms is expected across the region today. The best rain chances should be south of I-20 where the deepest moisture exists. Severe weather is unlikely, but a storm or two could produce gusty winds, heavy rain and cloud to ground lightning. Otherwise, afternoon high temperatures will range from the mid 80s in the southwest to lower 90s in the northeast.

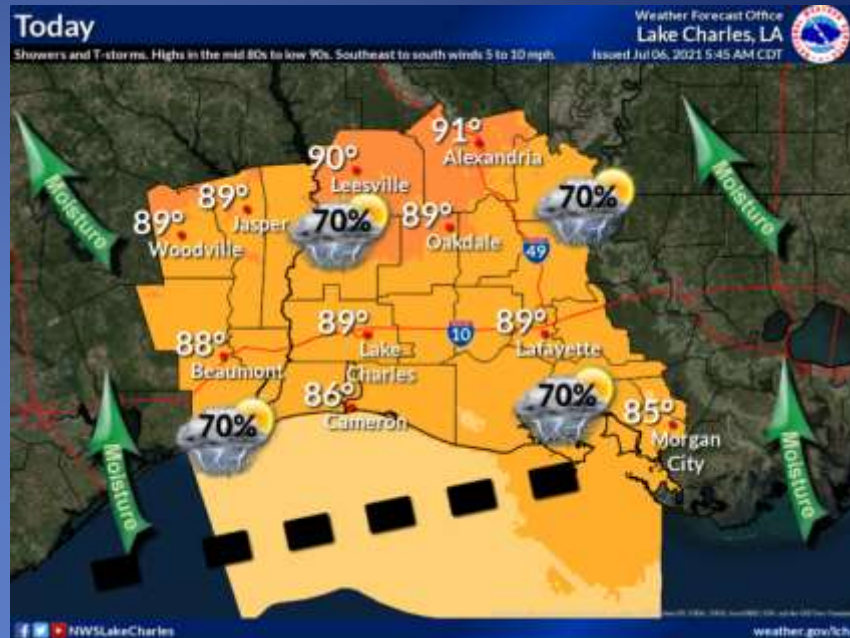

Scattered to numerous showers and thunderstorms are ongoing and should continue through the day. In addition to a cloud to ground lightning threat, locally heavy downpours leading to flooding in isolated spots is possible. The coverage of showers and storms is forecast to decrease around sunset, with isolated coverage then possible during the late evening hours.

Hazardous Weather

Heavy downpours today with slow moving storms.

A weakening upper level low over Old Mexico and South Texas will spin a weak slow moving upper level trough into the area. Deep moisture off the gulf combined with the trough will produce showers and thunderstorms across our area. Highs will be in the mid 80s to low 90s with southeast to south winds 5 to 10 mph.

Hazardous Weather

A weak upper level trough will move slowly northward across the area keeping scattered showers and thunderstorms in the forecast. Lows will be in the low to mid 70s with east through south winds around 5 mph.

Numerous showers and thunderstorms will affect the coastal plains of south Texas today and tonight. Rainfall amounts will average from 3 to 4 inches with isolated amounts up to 6 inches possible through early Wednesday morning. Rainfall rates up to 3 inches per hour could lead to flash flooding today through tonight.

Hazardous Weather

Showers and Storms Today

Locally Heavy Rainfall Possible

Weather Forecast Office
Corpus Christi, TX
Issued Jul 06, 2021 4:23 AM CDT

Numerous showers and thunderstorms will occur across south Texas today. Locally heavy rainfall will be possible, especially over the Coastal Bend and Victoria Crossroads. Highs will be in the 80s. Showers and thunderstorms are expected to decrease in coverage by late afternoon.

Showers and Storms Continue Tonight

Locally Heavy Rainfall Possible over the Coastal Plains

Weather Forecast Office
Corpus Christi, TX
Issued Jul 06, 2021 5:09 AM CDT

Scattered showers and thunderstorms will continue into this evening. But rain and storm chances will increase again across the region late tonight into early Wednesday morning, with the activity expected to become more numerous. Locally heavy rainfall could lead to flooding over the coastal plains.

Hazardous Weather

Cloudy and rainy today. Some heavy rainfall possible.
